

Structured intake and AI interviewing, under your brand.

A working platform for organisations that take in requests from people and have to decide who to let in. Template-driven applications on one side, an AI messaging layer on the other — both already running in production.

DELIVERY

White-label, your domain

Intake is the work nobody budgets for

01 Requests arrive as free text

Email, phone, walk-ins. Someone reads each one to work out what it actually is, which department owns it, and what is missing before anything can move.

03 Applicants call to ask where they stand

No status anywhere means every update is a phone call, and every phone call is a person who is not processing the queue.

02 Staff retype the same letter

The wording is near-identical every time. The part that genuinely varies is five or six fields — and those get keyed by hand, with the errors that follow.

04 Screening happens on instinct

Two interviewers, two sets of notes, no common ground. Nothing in the file lets a third person re-check the decision six months later.

One path from a person's problem to a filed, routed document

The engine is domain-agnostic: every stage is driven by the selected template, so changing the subject matter means changing the library, not the software. The messaging layer is not a bolt-on chat window — it feeds the form and checks the output.

A template is a recipient, a field list and a body

TEMPLATE BODY · MERGE FIELDS RESOLVED ON GENERATE

I, `full name`, resident at `address`, am applying in respect of `case subject`. The circumstances arose on `incident date` and are as follows: `description`. I ask that you review the matter and respond within the statutory period.

Подання звернення

Виберіть шаблон та заповніть необхідні поля

Скарга на дії ТЦК

Скарга на дії ТЦК

Цільові організації: Міноборони України, командувач Сухопутних військ ЗСУ

Обов'язкові поля: ПІБ, назва ТЦК та СП, дата інциденту, опис обставин справи, додаткова інформація

Необхідні документи: документи, що підтверджують обставини справи

LIVE DEPLOYMENT · TEMPLATE HEADER STATES WHO IT GOES TO AND WHAT IS REQUIRED

- **Routing is part of the template.** Each one names the organisations it is addressed to, so the request leaves correctly addressed without a triage step.
- **Required fields and documents are declared,** and shown to the applicant before they start — incomplete submissions stop being the default.
- **The contact block fills itself** from the applicant's profile. They enter the case, not their own details, again.
- **Conditional clauses.** A checkbox appends a prepared paragraph to the body — used in production to let applicants add support for a specific legislative proposal.
- **Attachments:** PDF, DOC, DOCX, JPG, PNG, TXT, 5 MB each, carried with the submission.
- **Three outputs:** generate and copy the text, submit it to the recipient, or have the step-by-step instructions emailed.

Swap the library, keep the engine

The reference deployment ships 25 templates for a national membership organisation. None of that vocabulary is in the code — a template is data.

What you author per template

- Recipient organisations · the addressee list
- Required fields · typed, with placeholder text
- Required documents · shown before the upload step
- Body text with `{{merge fields}}` and optional clauses

What the applicant gets back

- A finished document they can read before it is sent
- A submission record with a status, in their own cabinet
- A searchable history of everything they have filed, with the recipient shown
- Instructions by email when they would rather file it themselves

One messaging core, three surfaces

Assistant chat

A thread that takes a typed message, a voice note or a document in the same turn. The file travels with the message rather than through a separate upload.

Scenario interview

A turn-based session with a game-master agent. Persistent and resumable; one active session per person, so a half-finished interview cannot be restarted to get an easier run.

Voice consultant

A call button on the page, opening with the context of the screen it was launched from — on the application screen it receives the drafted text and talks the applicant through it.

ONE ENDPOINT Accepts **text**, **audio** and **documents** in the same call — new surfaces reuse the core instead of adding a second integration.

- **Sessions are stored, not streamed away.** Every turn is written with its number, author and timestamp, so a whole conversation can be replayed later.
- **Agents carry context.** The interview agent is briefed from the person's profile; the application agent is briefed from the document on screen.
- **Voice is a first-class input**, not a transcription bolt-on — the record button sits next to the text field on every surface.

Interviews you can actually compare

The agent reads the candidate's own profile, builds a scenario around it, and then applies pressure. Everyone is tested on judgement under the same structure, and the transcript — not one interviewer's memory — is what goes in the file.

GENERATED FOR A CANDIDATE WHOSE PROFILE SAID "ARTIST, KYIV"

Two days before a public event, the candidate is suddenly handed coordination of five community groups. A local businessman pushes to have an advertising billboard included in the speech "as an art object", hinting at additional support for the organisation.

Residents are known to object. The projector is broken.

Four things are being read at once: the ethical call, the handling of a donor, communication under a deadline, and resourcefulness when the equipment fails.

Session mechanics

- **Every turn is structured** — situation, goal, resources, challenge — so answers land in comparable slots.
- **Free-text replies, 3 to 2,000 characters**, or dictated by voice.
- **The scenario reacts.** Refusing the donor did not end the pressure in the live run; it changed its shape and came back in the next turn.
- **One live session per person**, resumable after a disconnect, abandonable on record.
- **Full transcript retained** per session and attached to the applicant's file.
- **Scenario briefs are yours to write** — the agent takes the competencies you want probed.

What ships with the two core modules

Member cabinet

Profile assembled from the interview, application status on the card, editable details, avatar storage.

Branch directory

Offices on a map with head, phone and address. The reference deployment carries 25 regional entries.

News feed

Pulls from your existing public site — slider, latest items, search by headline — so the cabinet is worth opening between applications.

Progression ladder

Twelve configurable levels with a progress bar and the next step named. Rename them to your own grades.

Event calendar

Month view with status filtering — upcoming, active, finished — plus region, venue and event type per entry.

Address autocomplete

Typed addresses resolve against an open geocoder, country-scoped, so region data stays clean enough to route on.

Referrals

A personal invite link per member, with a downloadable QR code for printed material and a counter of who came in.

Roles, sessions, consent

Visitor and member roles with separate surfaces, JWT access and refresh tokens in HttpOnly cookies, email verification, explicit data-processing consent captured per submission.

Localisation

The running deployment is Ukrainian end to end; the interface strings and the whole template library are content, not code.

BRANCH DIRECTORY

EVENT CALENDAR

NEWS FEED IN THE CABINET

Six steps from your forms to a running deployment

01	02	03	04	05	06
Brand & domain	Template library	Agent briefs	Reference data	Pilot	Rollout
Your identity, your domain, your sender address.	Your forms authored as templates: recipients, fields, documents, body text.	The competencies you screen for, written into the interview and assistant agents.	Branches, regions and the first calendar of events loaded.	One department or region runs live intake end to end.	Remaining units onboarded, admin handover, support in place.

What we deliver

- Deployed white-label instance
- Template authoring
- Agent prompt design
- Data migration
- Admin training & handover
- Ongoing support
- Source access on request

Commercial structure: licence, one-off setup, and support — terms depend on scale and on how much of the template library you want authored for you.

Next step

Send us one form you process by hand today. We will author it as a template, run a real submission through the engine, and show you the generated document and the applicant's view of it.
